Environmental Tip of the Day

Shower power!
A full bathtub requires about 70 gallons of water, while taking a five-minute shower saves water by using 10-25 gallons.

Fort Meade's Restoration Advisory Board (RAB)

What is a RAB?

In keeping with the goal of full public involvement in installation restoration decisions and activities, the Army encourages the creation of a Restoration Advisory Board (RAB). The RAB is a forum for discussion and exchange of information about an installation's environmental restoration program under Installation Restoration/Base Realignment and Closure (IR/BRAC) or Formerly Used Defense Sites (FUDS).

The RAB is composed of representatives of the community, installation and regulatory agencies and is a body of individuals providing individual advice, not a decision-making body. Both the installation and the community jointly chair the RAB. The RAB provides an opportunity for community participation and ongoing discussion and input and RAB complements, not replaces, other ongoing community relations activities.

When is a RAB required?

RABs must be established at installations where property is being transferred to the public and where there is sufficient, sustained community interest in the environmental restoration program. Criteria for determining sufficient interest are:

- The installation is on the Base Realignment and Closure list, and property will be transferred to the public.
- An affected local, state, tribal, or federal government entity requests a RAB be formed.
- At least 50 residents of the local community or region sign a petition requesting that a RAB be formed.
- The installation determines a RAB is needed.

RAB Members

Restoration Advisory Board members include representatives from:

- USAEC or army Installation
- Local community
- U.S. Environmental Protection Agency
- State environmental regulatory agencies
- Local government

RAB Member Responsibilities

When a Restoration Advisory Board is established, the members are expected to:

- Provide input to environmental restoration issues to Army installations and regulatory agencies
- Hold regular meetings, which are publicly announced and open to the public at convenient times and locations
- Review, evaluate and comment on project documents
- Recommend priorities among sites or projects
- Identify applicable standards for cleanup
- Propose cleanup levels consistent with planned land use as specified in the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA)
